

A functionality quantum leap

The Danish software vendor, NovaVision Software A/S announces the immediate availability of the latest version of the leading ERP/MIS system PrintVis®.

With version 5 of PrintVis, the software takes a quantum leap forward in advanced functionality, and offers customers several exciting new features in addition to, the rich functionality already present in PrintVis.

Real-time JMF signals

Until now, PrintVis have been able to send JDF intent, but not to receive JMF signals back. By the introduction of a partnership with iexact Software GmbH, PrintVis is now able to receive JMF signals in real time, and thus dramatically increasing the visibility of the shop floor in the MIS system.

New Gantt planning

As a supplement to the on-board Gantt planning feature, NovaVision have introduced integration to the advanced Gantt tool, EQ Plan from the Swedish software vendor, Timemetrics. EQ Plan is an optional planning tool for customers with advanced Gantt planning needs. EQ Plan does not replace the existing planning features, but adds yet another choice to the existing rich planning functions. The integration will be delivered free of charge to customers, who upgrade to PrintVis v.5, but they will have to license EQ Plan separately from Timemetrics.

Ganging

Another important new feature is the ability to combine several jobs on one sheet from within the MIS system, also known as ganging. This feature makes it possible to optimize the use of paper in the production, and thereby increasing profitability.

Designed for Microsoft Dynamics NAV

PrintVis have, as the first MIS system in the world, received a very exclusive recognition from Microsoft, as PrintVis v.5, after extensive testing; have received the Designed for Microsoft Dynamics logo.

For customers, this means that PrintVis now have the same look and feel as the rest of the Microsoft applications, like Microsoft Office. So, users will experience, that PrintVis has the same terminology, menus, graphical look etc. as the software they already know how to use. This reduces the time to become familiar with the software, increases productivity and thereby reduces the cost of ownership of PrintVis.

About NovaVision

NovaVision is a Danish Microsoft Gold Certified software vendor, who develops and markets the MIS system, PrintVis. PrintVis is an integrated MIS/ERP system for the graphical arts industry, and is built on Microsoft Dynamics NAV (Microsoft Navision) which with more than one million daily users is the world's largest ERP platform. PrintVis is marketed, sold and implemented globally by a network of highly skilled partners.
