

Full PrintVis system available for €99 per user per month

Odder May 29th 2008

NovaVision Software A/S, the maker of the leading MIS/ERP system for the graphical arts industry, PrintVis®, hereby announces the availability of PrintVis as a rented (hosted) solution.

For customers, PrintVis as a service gives access to the full PrintVis system as well as the world's leading ERP system, Microsoft Dynamics NAV, as a hosted service, and introduces a number of advantages for the customer.

Usage based cost

The SaaS (Software as a Service) option means, that the customer only pays for the number of users they need, when they need them. For example, if a customer have a high seasonal workload, he may increase the number of users temporarily, only paying for the users for the duration of the high season.

Enables customers to focus on what they're good at

The SaaS model removes the management of servers, upgrading, patch management, backup procedures, hardware scaling etc. to a professional datacenter, enabling the customer to focus on their core business instead of managing an IT environment.

Low entry investment

In traditional software licensing, the customer have to pay for the software license upfront. This makes it a very large investment, especially for smaller companies, to get access to an advanced MIS system like PrintVis. With the SaaS model, even smaller companies can afford a system like PrintVis.

Always up-to-date

The Maintenance fees and upgrades to the latest versions are included in the cost, so the customer will always have access to the latest version of the software. No more time-consuming and costly upgrade projects.

"I am very satisfied, that we are able to deliver this licensing option to our customers." Says NovaVision Software A/S' channel manager, Lars Strøm Valsted. "We have experienced an increasing demand for this type of licensing from both potential and existing customers, and I surely understand why. I mean, why should companies manage their own IT systems? It is not their core business. In my view IT should be as easily accessible as water or electricity, and you really don't see many companies running their own power plant or water work, do you?"

About NovaVision

NovaVision is a Danish Microsoft Gold Certified software vendor, who develops and markets the MIS system, PrintVis. PrintVis is an integrated MIS/ERP system for the graphical arts industry, and is built on Microsoft Dynamics NAV (Microsoft Navision) which with more than one million daily users is the world's largest ERP platform. PrintVis is marketed, sold and implemented globally by a network of highly skilled partners.
